

## Intelligence Test, Part 1

You have to work out what the letters mean. See No 0 as an example.  
It doesn't matter if you write the answers in uppercase or lowercase, but the answers must be exactly as expected (no additional intervals or dashes and the spelling must be correct).  
There is no time limit for this test.  
Answers will automatically be verified as you type 'em.

Scoring: 1 to 5 is Average, 6 - 11 Somewhat Intelligent, 12 to 18 Intelligent, 19 + Genius

**CORRECT ANSWERS:** 29 / 33

e-mail

Believe it or not, this type of test can be a good estimate of intelligence (if you excuse the cultural bias). People who did well on this type of test are likely those who are gifted with verbal ability and linguistic pattern recognition. This sort of assessment would discriminate against those with non-linguistic pattern recognition (like solving jigsaw puzzles) and spatial intelligence (like the ability to use a map or see hidden figures in a drawing).
